ANALYST ASSESSMENT · HIGH CONFIDENCE

CRITICAL

Analyst Assessment

Volume on `www.example.com` is materially up (+210% on the top host) and 429s are spiking on `/login/*` — both consistent with a login-attack pattern, but per-actor evidence is unavailable on this cluster so naming specific origins is out of reach. The spike flags `volume_up` + `rate_429_up` are the only concurring signals, with no SIEM surface and no raw-log breakdown to confirm whether the increase is concentrated on a handful of actors or spread broadly. Escalation should wait on raw-log access for this scope rather than acting on summary evidence alone.

FINDINGS

Evidence-backed findings

Findings are generated from deterministic suspicious-target evidence.

Finding 01 · Finding 01

CRITICAL

Spike flags fired without a named actor.

Volume up, 429 rate up confirmed at the scope-table level, but the heuristic ladder did not flag any individual target — likely a distributed surge spread across many small contributors.

Finding 02 · Finding 02

HIGH

No additional flagged signals in this window.

this window shows movement worth investigating; the evidence is not yet decisive.

RECOMMENDED ACTIONS

What to do next

Actions are candidates with scope, duration, validation, and rollback criteria.

01

THIS WEEK

Target: Detection and response coverage · Duration: Post-incident · Rollback: N/A.

Schedule retrospective — review SIEM coverage on affected endpoints

Why this recommendation exists: observed edge action and flagged-target evidence can diverge after an incident.

ATTACK SHAPE

How the pressure presented

Traffic shape is derived from deterministic window evidence.

WHERE THEY AIMED

Top paths by request share

/login/*	1.50M	69.8%
/api/v1/auth/*	340.00K	15.8%
/	120.00K	5.60%

Path rows may be unavailable when raw drilldown is degraded.

COORDINATION SIGNALS

Observed coordination signals

ASN concentration	● NOT OBSERVED
Shared path targeting	● NOT OBSERVED
Overlapping active window	● NOT AVAILABLE
Shared UA/cohort	● NOT AVAILABLE
Shared edge action profile	● NOT AVAILABLE

Signals are mechanical evidence, not attribution claims.

ACTORS

0 FLAGGED

Raw actors and action priority

Rows are the highest-volume raw client IPs; severity is only shown when matched to the action-target heuristic.

#	CLIENT IP	REQUESTS	SHARE	429%	SEVERITY	EDGE ACTION	ATT&CK
---	-----------	----------	-------	------	----------	-------------	--------

Rows are truncated for fixed-page print layout.

WHERE THEY HIT · TOP HOSTS

Affected hosts

Top host evidence from scope artifact.

Technique mapping and method

Mappings are deterministic labels from observed behavior.

N/A

NOT MAPPED

No ATT&CK mapping available

The available evidence did not include mapped techniques.

METHODOLOGY

This report is presentation-only. Metrics, ranks, evidence limits, and scores come from deterministic incident artifacts. Credential ATT&CK mappings require auth-specific corroboration before being treated as findings.
